

LIMIT YOUR DOWNTIME, NOT YOUR PROFITS.

In a mining operation, profits grow under tight tolerances.

Every minute spent switching a paste line adds up fast, so we designed valves to make it quick, safe and simple. The welding needed to place and remove lines used to take days, so we created threaded couplings to dramatically reduce the man hours needed, and our case hardened pipe saves time and money over the long haul. So we are engineered for safety, and speed and durability, but when you add it up, we're also engineered for profits.

Induction Hardened Pipe

- Exceptional abrasion resistance provides durability
- Reduces downtime for line switching

Threaded Coupling Line

- Faster assembly, installation and removal
- Allows for smaller bore holes
- Reduces man hours from days to hours
- Uses Induction Hardened Pipe for exceptional abrasion resistance and durability

Diversion Valves

- Quickly and easily switch lines - even under pressure
- Increases safety and productivity
- Eliminates need for extra equipment
